

# WINDSOR 2014 CONFERENCE

---

## COUNTING THE COST OF COMFORT

### THE WORKSHOP PROGRAMME

#### **WORKSHOP 5: Daylight and Comfort**

**Invited Chairs: Luisa Brotas and Jan Wienold**

12<sup>th</sup> April 2014: 16.30 – 18.30 – Flitcroft Room (2 Hours)

As issues like the cost of energy and the comfort impacts of more extreme weather events begin to matter more to building users and management because of their comfort, productivity and budget implications, the vital relationship between optimising the daylight performance of buildings while minimising the comfort penalties of doing so become increasing key to the success of building designs. New metrics on daylight, glare, visual comfort, adaptation and dynamics of light as well as its relation with artificial light and controls are pivotal to this agenda. In this workshop three papers on the subject will be presented and discussed in relation to the many different aspects and benefits of comfort in well-lit buildings that do not tend to overheat, central issues to this 2014 Windsor Conference.
